Essays

What excites you about a career in engineering/technology? Why do you think your abilities and skills are a good fit for Plaksha's B.Tech program?

I always wanted to do engineering as i always loved experimenting with computer, mobile devices. The current trend is moving towards new technology and improvements to the existing hardware and software at a rapid pace. I as a student need to be ahead of my competition by choosing a good institute like plaksha which not only offers great teacher student ratio but also regular hackathons, labs and research facilities, students of plaksha winning the hackathon organised by yale is also a great achievement which i suppose would only be possible with the right guidance by faculty and also the efforts of students. I as a tech enthusiast would love being under the guidance of such esteemed faculty, i have already learnt basics of java and published a few games in google play store, thus possessing a good foundation which could be polished under the faculty of plaksha. The b.tech program at plaksha is going to be very useful for someone like me who is interested in tech, plaksha has a huge number of clubs which would also be great for overall development, I personally like chess a lot and also have won a few state tournaments when i was younger, i would definitely love reviving that hobby of mine at plaksha which has a huge number of clubs and option for new clubs. Maths being my favourite subject and also my strongest with the exception of mechanics in physics as it requires visualisation would be very helpful in my competitive programs. The best part of technology is that it can go on forever meaning i would have the opportunity to learn forever and explore many of the untouched, yet to be discovered parts of it. Plaksha having a vast number of research labs and other things to support students would support me learn new things about technology and other things that i would need to know about engineering.

Share a time when you contributed to a project or activity that positively affected your school or community. What challenges did you face, and what did you learn about leadership and perseverance?

I was almost always the head of the group when we were doing a science project / science fair. There were many times when the initial idea was good but many improvements could have been made later on. One such incident was us designing a alarm for water tank the initial prototype had a basic wire with a metal strip at the bottom of the tank and then another at the top of it, the alarm would go off when the circuit was complete i.e water is completely filled, there were a few reasons why this prototype was good but not the best way. The first was the risk of corrosion at the metal plate especially the bottom one, we simply fixed that by moving both the metal strips to the top. Another problem was this wasn't universal i.e didn't work for pure, distilled water which could've been a limitation, we fixed this by having a closed enclosure with the bottom open and the insides having a earbud which had a thin lining of metal on top and a metal strip on top of the enclosure, the earbud being light and with less density would float up and hit the metal strip completing the circuit this eliminated the factor of conductance of water, this new setup now could be used in many places with a liquid system or even pressure chambers when built with enough resistance for the movement of earbud. Outside of the setup was a simple 9v battery and a buzzer which would normally work and the setup acting as our switch. Similar setup (initial prototype) was also used as a alarm mechanism for doors with an addition of a spring at the hinge which would make buzzer go off even at slight opening of door and also let the door be completely open, the metal strips are attached at the hinge and wall, the strip on the wall had spring to complete circuit at the slightest opening. We used a switch in the second system as we didn't want it to ring when we our classroom doors were open while teaching.

Is there anything else which you would like to share with us which would help us understand you better?

No

Description

Extra- Curricular Activities (Outside the Classroom)

	Activity	Highest level of participation	Number of years of participation	Positions of responsibility/ achievement
1.	chess	State	6	state 4th ranked
2.	cricket	Inter School	3	vice captain
3.	table tennis	Personal	8	

Co- Curricular Activities (Tinkering, Research and More)

	Activity	Highest level of participation	Number of years of participation	Positions of responsibility/ achievement
1.	science fair	Intra School	3	captain (always), won twice
2.	made a game on teachers day	Class	1	selected as best project on teachers day

Leadership Role at School

	Position	No of Years	Roles and responsibilities
1.	class monitor	3	check schedule everyday and verify notes, project submissions

2.	science fair	3	make sure everyone did their part , check for improvements at everypoint.
