Essays

What excites you about a career in engineering/technology? Why do you think your abilities and skills are a good fit for Plaksha's B.Tech program?
--

I have always been a tinkerer at heart. My school days have been all about fiddling with technological tools as part of competing in science fairs, hackathons and olympiads. Given my innate intellectual curiosity, analytical skills and keen desire to design technological solutions to real-life problems, a career in engineering seems to be my natural calling.

My first brush with tech competition was participating in the World Robotics Olympiad (WRO) in grade 5. It was such fun learning block programming as well as designing robotic assemblies for the first time. The fact that we managed to reach the national levels of the competition was enough to hook me onto tech and engineering design for life. My next project was a Scratch-based game designed to teach financial literacy to young kids. It was inspired by a book I had read called "The Richest Man in Babylon". Again, it was real fun trying to learn the right programming tools to gamify concepts I had learnt in the book. My interest in designing technological solutions to real-life problems grew over the Covid years. PRANA - an electrolysis based home respirator and SMART - a low-cost EEG for home rehabilitation for stroke patients, both won awards at national science fairs.

In addition, I have developed an interest in computational linguistics and won medals at national level linguistic olympiads. Competing in these events has sharpened my analytical skills and tested my patience and perseverance in solving complex computational linguistics problems.

As you can see, I am curious about exploring a wide range of tech-related topics - programming, robotics, computational linguistics and more recently data visualization as well. However at this stage of my life, I would honestly find it hard to select just one of them as my specialisation for life. To this extent, I am extremely glad that Plaksha has an interdisciplinary approach to its BTech program giving students the flexibility to choose their major after exploring options in the first year. I am also glad that Plaksha offers cutting edge, industry-focussed curriculum with strong emphasis on project-based learning, an approach which I have enjoyed all through my school life.

I look forward to being at Plaksha where the inner tinkerer and innovator in me will find the right environment of intellectual curiosity and project-based learning. I hope to apply my strong analytical and design skills to developing tech projects which will not only be fun for me but will tackle real-world challenges.

Share a time when you contributed to a project or activity that positively affected your school or community. What challenges did you face, and what did you learn about leadership and perseverance?

I strongly believe that the character of a person is shaped by his surroundings. Looking around, I see people who face immense hardships due to a lack of resources. But in the midst of all this adversity, I notice a strong desire to innovate and improve. After all, when you have limited resources, you are forced to become more creative. During the Covid years, the newspaper was replete with articles of how the oxygen cylinder shortage caused the loss of numerous precious lives. This inspired me to come up with a simple technological solution in an attempt to solve this nationwide challenge.

Following several days of ideation, I came up with PRANA, a portable, low cost electrolysis device for the production of oxygen for healthcare purposes. However, ideation was only the first stage of the process. While working on the project, I faced numerous setbacks along the way. They ranged from household outlets being an inappropriate voltage source for electrolysis to optimizing oxygen flow rate while ensuring that the gases evolved do not intermix. Upon further researching the intricacies of electrolysis, I solved this by implementing a rectifier and a step down transformer into the circuit to obtain the DC voltage most suited for the task.

Through months of iterations and countless prototypes, I finally designed and 3D printed a working oxygen capture mechanism and won a medal at the national science and engineering fair.

From this experience, I learnt that the process of innovation was not a straightforward process. Instead, it involved multiple stages beginning from ideation and prototyping followed by testing and reiteration. While the journey truly put my patience and perseverance to the test, I really enjoyed the process. This inspired me to pursue engineering, a stream that would encourage me to develop similar technological solutions to everyday problems.

Carrying on the learnings from my first endeavour, I created my second project SMART(Stroke Monitoring and Rehabilitation using Technology), a low-cost EEG for home rehabilitation for stroke patients.

Though the projects have not had a real world impact, working on them helped me observe the world around me and got me closer to prevalent issues. While doing so, I have learnt important technical and problem solving skills. But more importantly, I have learnt essential life lessons such as perseverance, hard work and employing a never give up mindset, one I hope to adopt in all my future endeavors.

Is there anything else which you would like to share with us which would help us understand you better?

No

Description

Extra- Curricular Activities (Outside the Classroom)

	Activity	Highest level of participation	Number of years of participation	Positions of responsibility/ achievement
1.	Chess	State	10 Plus	Placed in multiple inter school and state tournaments. Achieved a FIDE rating 1537 as of 2025. Peak online rating of 2233 in the rating format under the username AdvaitAAttavar

2.	Table tennis	Inter School	6	Participated in a state level table tennis tournament. School table tennis captain of National Public School. Won Numerous intra school table tennis events.
----	--------------	--------------	---	--

3.	Swimming	Inter School	5	Participated in a state level swimming championship. Won multiple inter school and intra school swimming events.
----	----------	--------------	---	--

Please Upload Your File.				
Yes				

Co- Curricular Activities (Tinkering, Research and More)				
	Activity	Highest level of participation	Number of years of participation	Positions of responsibility/ achievement
1.	Panini Linguistics Olympiad	International	5	Qualified for the national training camp for 2 consecutive years and qualified in the Asia Pacific Linguistics Olympiad. Honorable mention the national training camp
2.	Research project PRANA (Portable Respiratory Apparatus using a Novel Approach)	National	1	Secured Gold in the regionals of Indian Science and Engineering Fair INSEF and qualified for nationals where I secured bronze.
3.	Research project SMART(Stroke Monitoring and Rehabilitation using Technology)	National	1	Qualified for the nationals of Initiative for Research and Innovation in STEM (IRIS) science fair.

Please Upload Your File.				
Yes				

Leadership Role at School			
	Position	No of Years	Roles and responsibilities
1.	Chess school captain	2	Led my school team to first place in multiple interschool events. Organized in the tryouts and selections of other team members.
2.	Math club event head	1	Successfully organized an inter school Math fest Mathrix
3.	Table tennis school captain	2	School captain for National Public School Indirangar. Organized in the tryouts and selections of other team members.
