What excites you about a career in engineering/technology? Why do you think your abilities and skills are a good fit for Plaksha's B.Tech program?
--

In 2011, my dad handed me his iPhone 4 to let me play Angry Birds. As far as I remember, this was one of my first encounters with technology. Of course, my 4-year-old self loved the game, but I still remember being enamoured with how simply swiping my finger could propel the red bird on the screen. This moment sparked a lifelong curiosity for science and technology which has driven my academic and personal journey.

Throughout my academic journey, I’ve gravitated towards STEM subjects, consistently excelling in Mathematics, Computer Science, and Physics. I was the school topper in IGCSE for Extended Math, Co-ordinated Sciences, and Computer Science, and have maintained that position in my IBDP class as well. Yet, beyond the classroom is where I’ve truly discovered my passion. My first analytical challenge came in the form of HCL Jigsaw, a national critical thinking competition, where I ranked among the Top 9 of over 7,000 participants. But while solving abstract problems fascinated me, building real-world solutions excited me even more.

At our school’s flagship tech competition, my team and I developed a cost-effective Braille Printer using an Arduino Mega, RAMPS 1.4, and a solenoid electromagnet. In doing so, we reduced the cost of production to just ₹14,000—almost 95% lower than the next cheapest market alternative of ₹3,00,000. Demonstrating it at the National Association for the Blind and seeing the excitement on the students’ faces cemented my belief in the transformative potential of technology. It was there that my goal was truly solidified: to use technology to make a meaningful impact on society. Our work won the competition and earned us a spot at a workshop at CERN, where I had the opportunity to learn about particle physics, superconductors, quantum computing, and much more. We later upgraded the printer with a Raspberry Pi and OctoPrint for wireless connectivity, which helped us win the Young Creators League as well.

That experience introduced me to Plaksha’s mission, and I see my goals reflected in it. The university’s commitment to reimagining technology education and solving real-world challenges resonates deeply with me. Whether it's designing a game in Unity to promote sustainability at the International Environment Olympiad or being the Science & Technology head of my school and organizing STEM events, I’ve always sought to blend creativity with critical thinking. I have also completed Internships with IBM SkillsBuild and the Shiv Nadar Foundation helped me explore technical domains like AI, cybersecurity, and data analytics, to further strengthen my technological foundation.

I believe Plaksha’s interdisciplinary and hands-on approach will empower me to deepen my skills and broaden my impact. With its vibrant ecosystem of innovation and its focus on leadership, I am confident that Plaksha is the ideal place for me to grow into a changemaker who uses engineering and technology to build a better, more inclusive future.

Share a time when you contributed to a project or activity that positively affected your school or community. What challenges did you face, and what did you learn about leadership and perseverance?

As a child, I saw my mother fall ‘ill’ monthly, a severe chronic condition that went unacknowledged in my household. Upon asking about this mystery ailment, her hesitant smile and silence puzzled me, until years later when I came to the realization that she was menstruating. That silence was not just personal; it was part of a wider cultural stigma surrounding menstruation in India. This realization stirred something in me. I knew I had to break that silence for others who, like my mother, had grown up believing they had to hide a natural biological process.

That conviction led me to co-found MenstruAid, a student-led initiative aimed at promoting menstrual health and awareness among underprivileged girls. Our mission was simple but urgent: to spark open conversations, dispel myths, and provide access to hygiene resources. But as I would soon learn, changing deep-rooted mindsets would be anything but simple.

Our first campaign took us to a rural village where we performed a street play to initiate dialogue. The crowd’s initial response reflected the very taboo we were trying to dismantle, men lingered at a distance, women avoided eye contact, and an uneasy silence blanketed the space. As the play progressed, I saw subtle shifts, women began to nod in understanding, hushed murmurs turned to quiet laughter, and by the end, silence gave way to applause and shared acknowledgement. That applause wasn’t just for the performance but also for the courage to confront what had long been unspeakable. The challenges multiplied when we entered government schools to hold awareness sessions. Many of the girls sat silently, too embarrassed to ask questions. As a boy leading these sessions, I often felt out of place. But I soon realized that my presence, though unusual, was powerful. It signalled that menstruation wasn’t just a “women’s issue”, it was a human issue. Slowly, the girls opened up, asking questions about hygiene, pain management, and the emotional toll of stigma.

Leadership in this context meant more than organizing logistics or writing scripts, it meant showing up, listening without judgment, and standing firm despite discomfort. There were even times that I was asked to leave classrooms, as girls would feel uncomfortable asking questions in front of a boy. But those moments only strengthened my resolve. I learned that real leadership is about choosing discomfort for the sake of progress and that perseverance often means walking into spaces where your presence alone challenges the norm. To date, MenstruAid has reached over 500 students across five schools, adapting our approach to suit each community’s cultural context. However to me, more than the numbers, it’s the quiet shifts that matter; the girl who no longer feels ashamed to carry a pad, the father who asks where he can get more information, and the teacher who incorporates menstrual health into her lessons.

This project taught me that impact doesn’t always look like a revolution. Sometimes, it begins with a single conversation, and the courage to start one.

Is there anything else which you would like to share with us which would help us understand you better?

Description

Extra- Curricular Activities (Outside the Classroom)				
	Activity	Highest level of participation	Number of years of participation	Positions of responsibility/ achievement

1.	MenstruAid	District	1	Founded student led organization that combats menstrual stigma and hygiene issues in rural and underprivileged areas. Worked in a 4-person team to develop materials on menstrual health for approximately 500 students and staff, tailoring programs to 5 schools.
----	------------	----------	---	---

2.	Data Analytics Internship at HCL Foundation	Personal	1	Learnt basic data analytics, probability concepts and calculations, statistical distributions and inferences, data transformation and using PowerBI.
----	---	----------	---	--

3.	IBM Virtual Intern	Personal	1	Explored AI, Cybersecurity, and IoT for sustainability. Attended workshops on business innovation, enhanced entrepreneurial skills through practical applications.
----	--------------------	----------	---	--

Co- Curricular Activities (Tinkering, Research and More)

	Activity	Highest level of participation	Number of years of participation	Positions of responsibility/ achievement
1.	BROX - G-code driven single hammer braille embosser with WiFi Capabilities	National	2	Built braille printer using Arduino MEGA, RAMPS 1.4 and electromagnet, achieved 95 percent price reduction from market. Won 2 Competitions. Patent-Pending.

2.	International Environment Olympiad, Pixel Forge	International	1	Had to create a game which promotes sustainability. Teammate and I decided to Used Unity to create a Pacman clone. We swapped the sprites of the ghosts with cars and the sprites of the points with CO2. This made it so the goal was to avoid the cars and absorb all the CO2 emissions. Achieved 3rd place.
----	---	---------------	---	--

3.	IIT Madras E-Summit Young Entrepreneurs at School	National	1	National event promoting economic and entrepreneurial knowledge among high school students. Competition featured 2 rounds, PPTs on brand analysis and unique product ideas in 1st round. Top Performers were then invited to IIT Madras for Final Round which had an Economics Debate and an Entrepreneurial Quiz in Final Round. Won 1st place - 10000 INR
----	---	----------	---	---

Leadership Role at School						
	Position	No of Years	Roles and responsibilities			
1.	Space Settlement Design Competition - School Team President, Indian Team President	2	Led team of 60 students to simulate aerospace industry proposal, researched space civilization needs. Coordinated the development of space settlement designs by applying engineering principles. Did CAD Modelling. Achieved Runners-Up in Asian round.			
2.	School Science and Technology Head	1	Facilitated the school's STEAM week, overseeing approximately 250 exhibitions. Organized the STEM quiz. Facilitated guest such as William Kamkwamba and H.C Verma.			
3.	Core Member of School Technology Council	2	Planned and organized for various technology related events throughout the school, impacted approximately 100 Students & Teachers. Organized sessions on how to use AI in the classroom for teachers.
