Essays							
Answer any one of the questions from the dropdown.							
Tell a story from your life, describing an experience that either demonstrates your character or helped to shape it							
Please use the box below to type in your answer.							

Few years back, a seemingly biased competition changed my outlook and helped me comprehend the nature of my results. My friend and I were selected to represent our school in an inter-school STEM contest. Our goal was to use STEM skills to create solutions to real-world issues. We decided to work on a traffic control system that could seamlessly generate challan and redirect traffic on the fly to make way for any emergency service vehicle. It was a solid plan, and I think we did a great job realizing our project. The day of the event had finally arrived, and we felt pretty good about our chances. There were many unique and creative ideas with a ton of thought and work put in, but there is one project that I can still remember vividly. One team had made a line-follower robot that could be used to transport a few files around the school. It was clearly from some pre-made robotics kit. The judges soon came around to inspect our project. I think we did a decent job of conveying our idea. I was able to explain all of my points and answer their question sufficiently. The demo went without any hiccups. We didn't win 1st or 2nd place, which was understandable; they were clearly better than us, but 3rd place was given to the line-follower robot!! I was absolutely livid. I knew we weren't the best, but this clearly seemed like the wrong decision. It felt like a blatant miscarriage of justice. I was consumed by this feeling of being wronged, fixating on that moment and blaming the judges. Of course, this wasn't a healthy line of thought, and it was only hurting me. There was no use in focusing on something I couldn't change. The amount of work I put in is all that I have control over; it is the only way I can change my performance. My effort is the only thing that determines my results. "Between stimulus and response, there is a space. In that space, is our power to choose our response. In our response lies our growth and our freedom." — Viktor E. Frankl And I choose to attribute my successes and failures to my efforts.

What excites you about a career in engineering/technology? Why do you think your abilities and skills are a good fit for Plaksha's B.Tech program?

Understanding the technology that constantly surrounds us and the way each of its components interacts with each other as a part of a larger system excites me the most. Learning about the inner mechanisms of this sphere has always fascinated me. Engineering is a lucrative career with impressive prospects and a diverse selection of fields to work in. The rapid developments in this domain, which necessitate continuous learning, critical thinking, and problem solving, are ideal for fostering both professional and personal growth. The last two years I spent preparing for the competitive exams have inculcated a habit of hard work, discipline, and effectively utilizing my time. It has prepared me to face challenges, try out different approaches, and learn from my failures. I am highly motivated, eager to learn, and willing to push my limits. This mindset is my greatest strength, which hopefully is suitable for the program.

Is there anything else which you would like to share with us which would help us understand you better?

No

Extra- Curricular Activities (Outside the Classroom)

	Activity	Highest level of participation	Number of years of participation	Positions of responsibility/ achievement
1.	Music	Intra School	2	Our band performed at Punjab University and Satluj Public School
